DOCMANAGER APPLICATION

The efficient utilization of vehicles is vital for carriers. Missed or late maintenance of vehicles can result significant loss of turnover, while the lack of a valid MOT test certificate could lead to high fines if it comes to a roadside inspection. Keeping accurate records of drivers' licenses and exams, and renewing these in time can spare carriers from many problems. You can carry out the administrative tasks required for fleet operation, and keep records of vehicle and driver documents, licenses and permits in WebEye's system.
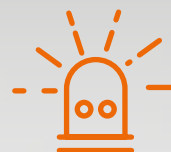

Set a notification for your documents based on date, kilometers or operating hours and DocManager will alert you on the WebEye platforms or even in email of all important tasks you mustn't miss to get done in time!

WebEye

DocManager is an efficient and easy-to-use tool to keep records of documents and administrative tasks

Store and manage all documents important to be recorded for your entire fleet!

Request notifications for performing the administrative tasks related to the documents based on date, km or operating hours!

You receive the notification on the interface of the Monitor and Monitor Mobile app or even in email if you wish, thereby ensuring that no important task is missed.

Save the DDD files from the tachograph along with your important documents and request a daily summary of the uploads via email!

The photos taken with the Scanner function of the Advanced Drive driver app* are added to your DocManager storage, too and can be made available to other apps through an interface.

*The application is available to our customers on the WebEye 2 platform
